Gabriel Bomfim

SENIOR SOFTWARE ENGINEER | BACKEND & FULL STACK | CYBERSECURITY

Atibaia, São Paulo, Brazil | gbr.bomfim@gmail.com | linkedin.com/in/gbr-bomfim | github.com/gabBomfim

PROFESSIONAL SUMMARY

Senior Software Engineer with 7+ years of experience building SaaS and enterprise software across cybersecurity, fintech, and business management. Promoted to senior at Redbelt Security, where I design integrations and contribute to architecture for multi-tenant, data-intensive systems. Delivered bidirectional integrations with ServiceNow, Jira, and TOPdesk that connect enterprise platforms and replace manual workflows. Strong in PHP, Laravel, Symfony, React, APIs, background processing, and practical software design.

CORE SKILLS

Backend: PHP, Laravel, Symfony, Node.js, REST APIs, WebSockets | Frontend: React, TypeScript, JavaScript, Vue.js

Data & Infrastructure: MySQL, PostgreSQL, Redis, MongoDB, Docker, Linux, GitHub Actions, CI/CD

Engineering: Software architecture, multi-tenancy, system integrations, queues, automated testing, PHPUnit, Pest, SOLID

Security Domain: Cybersecurity platforms, GRC, incident response, vulnerability management, SOC workflows, NIST CSF, ISO 27001

PROFESSIONAL EXPERIENCE

Redbelt Security — Software Engineer (promoted to Senior) | 2022–Present

Enterprise cybersecurity SaaS | Multi-tenant systems and integrations

- Designed and delivered bidirectional ServiceNow, Jira, and TOPdesk integrations, synchronizing information across enterprise platforms and reducing manual operational work.
- Built integrations and workflows supporting enterprise customers including Santander, VLI Logística, Grupo SBF, and Unimed, connecting security operations with customer service processes.
- Contributed to the architecture and implementation of a governance, risk, and compliance (GRC) module, applying cybersecurity concepts and assessment frameworks.
- Developed operational and SLA dashboards that give managers and customers visibility into incident handling and team performance.
- Worked across backend, frontend, APIs, asynchronous jobs, and high-volume data flows; participated in solution design, planning, and code reviews.

THR Softwares — Software Engineer (promoted to Mid-Level) | 2021–2022

Business management software and custom SaaS solutions

- Built a real estate management platform from the ground up, alongside financial systems and CRM tools using PHP, Laravel, Vue.js, and MySQL.
- Implemented Facebook and Hotmart integrations to support customer acquisition and business workflows, including real estate operations.

Holding RPX — Software Engineer | 2019–2021

Fintech and white-label banking software

- Developed banking operations tools, including a ticketing workflow that replaced email-based customer requests with a more structured support process.

INDEPENDENT PRODUCT

OrçaFast — Creator & Lead Engineer | 2025–Present

B2B SaaS for service-business quotes and workflow management

- Designed and built the product end to end, including its multi-tenant architecture, backend, frontend, infrastructure, and deployment.
- Implemented quote sharing, view tracking, team management, financial goals, Stripe webhooks, and transactional email with Resend.
- Added AI-assisted price suggestions using Claude; deployed on Hetzner with Docker and CI/CD workflows.

EDUCATION

FIAP — Associate Degree, Systems Analysis & Development | 2020–2022 | São Paulo, Brazil
